Datanational's eBusiness Solution Automates MAHLE Clevite's Supplier Workflow

Farmington Hills, MI. - Datanational Corporation, a leading provider of enterprise software solutions, has implemented their eConnect Supplier Portal solution to automate MAHLE Clevite's supplier workflow. MAHLE Clevite provides engine parts and filters to the traditional automotive aftermarket, as well as the performance and heavy duty markets.

Datanational's eConnect Supplier Portal is a Java-based web portal which streamlines online eBusiness transactions with built-in workflow and messaging. This solution provides a centralized system for suppliers to manage orders and other account information more efficiently, which in turn allows MAHLE Clevite to better meet customer needs.

"Overall, the new supplier portal helps reduce operating costs, improve inventory efficiencies and strengthen the supply base, so that we can provide better service to customers," said Markela Skenderi, Information Technology, MAHLE Clevite Inc. "MAHLE Clevite customers will surely benefit as we continue to provide industry-leading delivery fill rates."
