

Datanational Corporation Announces Solarsoft Technology Partnership

Farmington Hills, MI. - Datanational Corporation announces a new business partnership with Solarsoft Business Systems, a leading ERP software publisher for discrete manufacturers.

Datanational has strategically invested in the business infrastructure to deliver systems, facilities and bandwidth on-demand. Datanational has experience hosting Solarsoft iVP (formerly CMS/400) customers and has over 10 years of history interacting with Solarsoft ERP applications. We partner with Solarsoft to deliver world-class infrastructure, facilities, system management services and bandwidth on-demand for the hosted iVP implementations. We also provide cost-effective system recovery (DR) solutions for the IBM i customer base, as well as colocated target systems for full-blown high availability (HA) implementations.

At the shop floor level, Datanational's comprehensive MES system (PlantTalk:MES) is tightly integrated with Solarsoft iVP for the automotive sequencing requirements, including sequenced data integration, production reporting and shipment automation.

For more information about Datanational's solutions offered for Solarsoft iVP clients, visit <http://www.datanat.com/solutions/solarsoft.php>.

Datanational Corporation is the premier vendor of choice for customers looking for technology solutions. Our years of experience, diverse skill set, and hands-on approach allow us to successfully deliver the desired results based on our customers' requirements. Our continued technology focus provides us with the ability to become not only an IT solution provider, but also a Technology Partner.
