# Legacy Data Hosting for IBM System i (AS/400)

Solution Overview

Companies who have moved on to SAP, or other large-scale ERP software, often have legacy AS/400-based ERP data that needs to be accessible over the longer term. Keeping their legacy AS/400 applications and data online is a distraction for their staff, and a drain on their internal resources. Datanational's service delivers an alternative with a lower cost, along with a higher level of service that will free up the internal company resources to be focused on their new ERP solution and their business at hand.

Datanational's Data Hosting service is a Secured Cloud based IBM System i (AS/400) offering that delivers a lower total cost than can be delivered through in-house resources. Our solution runs on the latest technology IBM System i hardware with full blown IBM Maintenance and the latest version of the Operating System , maintained to move forward into the future without disruption.

We deliver this service at a lower overall annual cost compared to the in-house setup and at a much higher quality of service. Datanational provides comprehensive packages that are designed to meet the customer's specific needs. Pricing starts as low as $395.00/month and that includes the maintenance and data hosting provided by Datanational.
