Secure Disk-to-Disk Backup

Datanational has partnered with Carbonite to be able to provide a higher level of data protection and to provide clients with a turn-key disk-to-disk backup and disaster recovery solution. Carbonite data backup software securely and efficiently backs up your IBM System i and x86 JD Edwards system data via remote backup, and seamlessly extends your IT infrastructure into the cloud. Carbonite backs up dynamically, so there is no need to restore from multiple incremental backups.

Datanational is an Carbonite Cloud-Connected Service Provider. Backed by the Carbonite cloud, we deliver secure, reliable and efficient Carbonite SaaS-based backup and recovery services to the JD Edwards customers, as well as replicate their data to the trusted Carbonite cloud. If you were to experience a system outage, we will provide allocated hardware resource to restore from the local Carbonite solution at the Datanational disaster recovery data center.

Carbonite Server Backup features:
• End-to-end data security
• Eliminates the need for daily tape management and offsite media storage
• Managed disk-to-disk backup and recovery solution
• Replicates only changed and new data to remote vault
• Faster recovery than traditional restore from tape
