

# Managed Services and Support for **JD Edwards**

## **JD Edwards in the Cloud**

IBM System i and x86 reliability and JD Edwards functionality delivered when, where and how you want it security, high availability, reliability, flexibility, redundancy.

Each of these can be vitally important to an IT department today. Put them all together and you have a world class solution for your organization... but with the associated world class costs that may force you into cutting corners or making compromises at the expense of the user experience. Datanational's IBM Cloud offering provides each of these, at a rational monthly cost.

You can call it Cloud Computing if you like, but we house and manage the systems in concrete structures connected with state-of-the-art redundant communications, cooling, battery backup and on-site power generation. As an optional add-on service, we will replicate your system to a backup system located at another hardened and managed location to ensure the up-time availability of your ERP Software across multiple geographies. We manage these complicated systems around the clock so that your company can keep it simple and focus on what you do best.

# Managed Services and Support for **JD Edwards**

## **JD Edwards in the Cloud**

---

### ***What is Cloud Computing?***

It is a software solution platform delivered to your company's users without all the hassle of managing Information Technology.

It's simple. You decide to subscribe to a World-class ERP Software over a communication connection from any or all of your facilities and we provide everything else. We provide a System and the Service to keep the system available whenever you need it. We manage the technology changes, we monitor the system health, we watch the key events, we hit the marks, around the clock, 365 days per year.

### ***Why Cloud Computing?***

You probably don't own your own airplane or keep a fire department on staff. So why own your entire ERP system infrastructure? You can simply sign up for your JD Edwards on a monthly subscription plan with expandability on demand. We do the rest. Datanational's Cloud offering is Managed System Services with a Stated Service Level Agreement, backed by obsessive dedication to customer satisfaction.

### ***What does JD Edwards in the Cloud mean to you?***

It is a monthly subscription to a robust and reliable business system, powered by a company armed with hardcore experts who manage and monitor your solution on a 24/7 basis. We deliver the solution to your company with excellence, and your company focuses on doing what it does best. This is simplicity at its finest.

Datanational can host your JD Edwards implementation on our network of IBM System i and x86 equipment and deliver it to your organization securely, reliably and cost effectively. Our fiber optic backbone and multiple connectivity options will ensure your JD Edwards system is accessible wherever you need it. Our redundant power systems and high availability offerings will ensure it is there whenever you need it. And our staff of knowledgeable IBM and ERP specialists will help ensure your system is running in a way that makes sense for your organization.

Datanational can provide your organization with world class technology and reliability with a hosted JD Edwards solution. With Datanational's JD Edwards in the Cloud, you get the power and flexibility of JD Edwards coupled with all the benefits and reliability of the IBM i and x86 business computing platforms, for a monthly price that makes sense.
