Legacy Data Hosting

Datanational's JD Edwards Legacy Data Hosting service is a Secured Cloud offering that delivers a lower total cost than can be delivered through in-house resources. Our solution runs on the latest technology IBM System i hardware with full blown IBM Maintenance and the latest version of the Operating System, maintained to move forward into the future without disruption. This solution is a good fit for businesses who have moved on to SAP or other non AS/400-based ERP platform and have Legacy JD Edwards data that needs to be accessible over the longer term. Keeping their Legacy AS/400 and JD Edwards Application and data online in house is a distraction for their staff, and a drain on their internal resources.

Datanational's JD Edwards Legacy Data Hosting delivers an alternative with a lower cost, along with a higher level of service that will free up your internal resources to be focused on the business' new ERP solution and their business at hand. We reduce our clients' overall cost by sharing resources across many customers, in the same way that a fire department's cost is shared across a community.

This service provides your organization with one less thing to worry about so that your company is able to move forward with your business while we monitor and manage your old JD Edwards system. Datanational's improved service level provides for 7 x 24 x 365 day active and passive monitoring. Our team of experts ensures the continued operation of your system around the clock and addresses any issues that arise, regardless of the time zone or geography of your operation. We deliver a higher reliability for your system, making sure that your system is running smooth and your users are able to access everything they may need.
