Explore MIMIX[®] DR

Comprehensive and Affordable Entry-Level Disaster Recovery for IBM[®] i

If you think tape backup is all you can afford, think again.

MIMIX DR is the complete and affordable disaster recovery solution from the experts in IBM i data protection and high availability. It is designed for small to medium-size businesses on IBM i. These businesses need better protection for their data and applications and faster recovery than tape backups can provide, MIMIX DR continuously protects all day, every day to a DR system located on-premises, off-site or in the cloud.

Leveraging proven, trusted world-class technology that has been protecting thousands of businesses and billions of dollars in critical workloads for 22 years, MIMIX DR is specifically designed to guard your small to mid-sized business from the financial impact of data loss. Easy to manage on your own, or available in managed service or cloud hosting options.

Easy Operation

Gives you status information at a glance through the simple, intuitive Vision Solutions Portal user interface

- Enables monitoring and control from any device with a browser
- Customizable to meet your working style
- Provides lights-out, unattended monitoring with e-mail alerts for conditions requiring your attention
- Allows you to manage your DR solution in only minutes a day

Real-Time Protection

Comprehensive real-time replication to an on-premise, off-site or cloud-based backup system

- Eliminates the risk of data loss between tape backups
- Maintains a fully operable backup system that is ready and waiting to become the production system whenever needed
- Allows you to recover data up to the point of failure
- Improves your overall DR strategy with fast, reliable and convenient technology

Confident Recovery

Robust audits of your backup system ensure complete and reliable recovery. No more struggling with frustrating and time consuming tape restores.

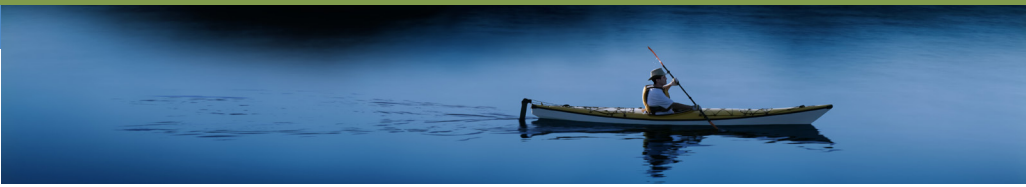

- Continuously detects and repairs out of sync conditions on your backup server
- Dispenses with corruption issues inherent in tape
- Provides you with complete confidence that you can failover if a production system failure, site failure, or natural disaster occurs

Affordable

Offers flexible implementation scenarios for any budget, including managed service and cloud hosted offerings from Vision's global network of partners

- Minimizes financial risks from data loss and downtime
- Allows you to satisfy regulatory mandates and SLAs
- Ongoing maintenance is minimal, keeping operational costs low
- Managed services or cloud-hosted options reduce capital expenses

Go Ahead. Replicate. Protect. Recover. Explore MIMIX® DR

Easy Control and Monitoring

Vision Solutions Portal provides an intuitive, browser-based user interface for MIMIX DR. Icons let you know at a glance when MIMIX DR is running smoothly, has identified a potential issue, or has encountered an error.

VSP's rich help system includes pop-up suggested actions when hovering over an icon. Configure email alerts for conditions requiring your attention to enable unattended monitoring when you are away.

Vision Solutions Portal Dashboard

MIMIX DR is available for customer environments running on Power Systems models P05 and P10 with one to four processors. It is a one way replication product to a backup server, which can be of any model regardless of P-group and processor number.
